

Magnification Chart

To find the magnification for you:

- Print out the chart. Each line is an example of newsprint magnified at a given power.
- Read it at a distance of 10 inches or 25cm from your eyes whilst wearing any reading spectacles you may have
- The line you can comfortably read is the magnification you need for a magnifier.
- The magnification power is listed on the right of the chart.

To view the range of products available for your power go to the Magnification Wizard and find your power on the chart displayed on the screen. Clicking on this power will take you to a list of the products available for your magnification.

You can find the chart on the next page.

Helping

15X/N120

you to

12.5X/N100

make the

10X/N80

most of the

9X/N72

vision you have

7X/N56

With magnifiers and

6X/N48

vision aids to help you

5X/N40

to read more clearly.

4X/N32

With help and advice from qualified

3X/N24

low vision Professionals and carefully chosen

2.5X/N20

products from quality manufacturers that have

2.25x/N18

been tried and tested in low vision clinics.

2x/N16

This is the size of small newspaper headlines.

1.5x/N12

After you have read the headlines you can read the whole story

1.25x/N10

with this the size of small newspaper print
